

AURORA ENVIRONMENTAL EQUIPMENT
CONSULTANTS L.L.C.

AEEC Installer Selection Criteria

All Aurora Environmental Equipment Consultants selected Installer Partners are chosen as a result of prior experience and have demonstrated skills via fieldwork performed for other retail clients. Once a company is identified or has contacted AEEC to be considered, they are visited to review their sites of operations and visits are made to observe some of their work. In addition to the groups as identified above, AEEC also utilizes a “second tier” of installation/service teams as back-up where and when needed. These back-up Installer Partners also adhere to the strictest standards as directed for all client installations and the quality work we demand.

All AEEC Installers are constantly reviewed for the quality of their work via periodic personal site visits by AEEC. The AEEC Installer Partners are also graded and reviewed per their submittal of both print and digital photos as predetermined via an specific equipment template, as well as required to provide signed off installation proofing and training documents.

AURORA ENVIRONMENTAL EQUIPMENT
CONSULTANTS L.L.C.

Any installer whom does not perform in an adequate manner is afforded a first corrective action step of verbal warning and correction to the installation deficiency, a second written reprimand with correction of deficiency, and a final third, dismissal from the recommended and approved “Installer List”. Installers are usually approached by the AEEC management personnel to discuss any necessary corrective action procedures and requirements. Of course, based on the work deficiency, any of the above actions can be instituted immediately upon discretion of AEEC.

Workmanship and quality of install, along with proper “regional” pricing for similar installations is a premium requirement for AEEC and as such, all installers are encouraged to perform at their peak always. We are here to serve our customers!

Thank you for your continued business,

The Aurora Environmental Equipment Consultants
